## 330 Series, CCTV & ITS Enclosures

As a leading manufacturer of enclosures and illuminated street name, blank out and lane control signs in the U.S., Southern Manufacturing has a history of quality and reliability that dates back to 1939

Utilizing a clear vision for traffic safety, Southern Manufacturing is dedicated to improving technology and fabrication. At the same time we are keeping the highest standards of quality, reliability and low cost of operation for our customers. Southern's depth of engineering and manufacturing turn today's challenges into tomorrow's realities

Southern Manufacturing offers 330 series enclosures to the traffic industry, including CCTV, ITS and DMS enclosures. We have, as standards, the 332; 336 and the 336S. All of our 330 series enclosures come standard with the "pagoda" top for rain and snow dispersal.

All of our enclosures are constructed from sheet aluminum, with double flanged door openings and neoprene cellular gasket to ensure a weather tight seal. The enclosure comes with butt hinges on each door (CALTRANS) and a three point locking system, which secures the door at the top, bottom and center. Locks are supplied with all 330 series enclosures. A two position door stop, allows the user to set the door at two separate pre-designated stop points for ease of access and to secure the door from wind gusts. In addition to standard 332, 336 and 336S enclosures we can customize the wiring in the enclosure to your exact requirements.

- Specialized fan plates
- Sun shields
- All styles of mounting are available
- Racking
- Shelves
- Power strip outlets
- Custom depths
- Pull out drawers for laptops
- Lighting
- Pre-wiring
- Heating and/or air conditioning
- Universal power supplies
- CCTV interface enclosures (GDOT)
- #2 Corbin lock standard (other locks available)

## Ventilation and Finishes:

Vent slots are provided on the underside of the cover overhang and louvered slots are formed in the lower portion of the door. This creates a natural movement of air and has a cooling effect on the electrical equipment. The slots may be screened upon request. Southern offers fiberglass and aluminum filters. Rain tight intakes prevent water from being drawn into the enclosure. Fans, lights, heat exchangers, air conditioners and thermostats are also available. The standard finish is mill aluminum. Additional finishes available upon request. Southern Manufacturing matches Federal Standard 595B Paint Colors and RAL for powder coat selection.
